

Clinics MANAGEMENT MADE EASY!

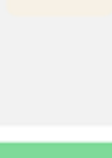

medikare features

Patients files management module

Patients files management module :

This module of Clinic Management System provides vital information for the patient information chart, which marks the outset of demographics capture. This encompasses patient's name, address and contact information, birth date, employer, and insurance information. The capture of patient demographics often starts when a new patient fills out a patient information chart. This information includes the patient's name, address and contact information, birth date, employer, and insurance information. Practice staff typically enter this information into the software. The software may automatically verify the patient's eligibility for receiving benefits with the insurance company using a standard electronic data interchange connection.

- » Insert, edit, delete and search Patient information which includes identity data ,contact data and insurance data
- » Upload attachments for patient and manage it smoothly.
- » Extract statistical and detailed reports for the patients registered or visited the clinics
- » Unique patient ID for tracking visits
- » Automatically verifies patients' benefits eligibility using secured electronic data interchange
- » Supports walk-in, telephonic appointment, and Emergency needs patients.

Appointments booking & schedule management module

Appointments booking & schedule management module :

Smart, efficient, well-managed appointment booking is key to the success of your business.

MedicaKare is loaded with smart, built-in features to simplify the process for you, your clients, practitioners and receptionist – no matter how big or small your practice.

What's more, you can access MedicaKare from any platform or device:

desktop, web, smartphone or tablet.

So anyone can book appointments anywhere, anytime – and keep your clinic busy with a full appointment schedule.

Medical Record

Medical Record :

The information contained in the medical record allows health care providers to determine the patient's medical history and provide informed care. The medical record serves as the central repository for planning patient care and documenting communication among patient and health care provider and professionals contributing to the patient's care. An increasing purpose of the medical record is to ensure documentation of compliance with institutional, professional or governmental regulation.

Complete and integrated medical record contains most required identity, contact and medical patient data like medical family history, Chronic Diseases, Genetic Diseases, Surgical History and Allergies History.

Additionally, all patient visits ,

services and attachments are included in patient medical record accessible by administrator, receptionist and physician.

Billing and invoices management module

Billing and invoices management module :

Accounting is crucial to your business.

There's no getting around it. That is why MedicaKare comes with an intelligent system that simplifies

your billing and accounting – no matter how complex your billing structure.

So you can focus on taking care of your clients.

Insurance and claims management module

Insurance and claims management module :

- » Submitting patient insurance information at registration
- » Contract and policy insurance settings management
- » Insurance approvals management
- » Extract claims reports

Reports cover each step of the workflow

Reports cover each step of the workflow :

Complete and detailed reports include invoices, income, services, patients , insurance claims, appointments and physician rate.

Doctor interface module

Doctor interface module :

- » Waiting list for patients
- » Patient medical record
- » Patient symptoms, diagnosis, medications and attachments
- » Request more services for the patient
- » Referral patient to other clinic
- » Patients visits, appointments, and doctor rate reports
- » Symptoms, diagnosis and medications settings

Patient Portal

Patient Portal :

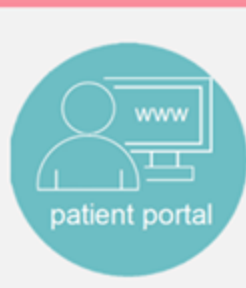

A patient portal helps in a number of ways and is a major aspect of our software.

Patients use the portal to provide their basic information electronically, entering each requested piece of data just once instead of filling out the same details in multiple forms jammed into a clipboard.

Patient portals also let patients communicate electronically to doctors and other staffers.

You can use the system to make patients able to booking their appointments and remind them about upcoming appointments.

The MedicaKare patient portal is a robust and comprehensive tool perfect for engaging patients and keeping offices running smoothly. As healthcare providers, you understand the importance of streamlining communication to get the most out of every encounter. Empower your patients by providing them with the tools necessary to take charge of their care. Boost productivity in the office and improve workflow with an integrated, user-friendly interface that allows secure access to patient information. Direct messaging and appointment schedules are just a handful of features offered in this essential tool.

Advanced Security

Advanced Security :

You would be right to have concerns about safeguarding the sensitive, personal information on all your patients. If criminals were able to access their records, the loss of privacy could prove to be devastating both emotionally and in terms of their financial security because of the issue of identity theft.

How many people on your staff have authorization to view patient records? Why do they have this access? Is the reasoning behind granting access to one staffer over another still valid? Paper based systems with filing cabinets and other storage devices typically need to be controlled with locks and keys and are often stored in rooms with more security protocols.

That's a lot of work, and it doesn't actually do much to protect patients' records as compared to using EMR software. MedicaKare will let you establish role-based access, so that only authorized staffers can get into the system. You can keep track of their attempts to see patient records and use the data for auditing document access control.

What's more, you won't have to worry about paper records being misfiled, lost or even stolen.

more reasons to go for medikare

- Integration capabilities**: Provide easy integration and interfaces to Financial accounting system, lab equipment and more third party applications.
- Multi center**: One of the very few solutions that supports multi-center operations. Scalable solution that grows with you as your hospital expands.
